

Item (LO Assessed)	Poor	Good	Excellent	Marks
Task 1: Architecture Vision Document (CLO1 - 10 marks)	Problem and/or system objectives not clear. Stakeholders and key concerns missing or inappropriate. (0 – 4)	Problem and system objectives defined but lack clarity. Stakeholders identified but concerns not appropriate. (5 – 7)	System objectives clearly described and address the problem. Stakeholders and their key concerns identified clearly. (8 – 10)	
Task 2: Activity Diagram (CLO1 - 10 marks)	Activity diagram does not show logical flow. Major errors in the use of diagram components. (0 – 4)	Main flow of activities identified with minor errors. Suitable use of some components(5 – 7)	Flow of activities is logical and clear with correct use of activity diagram components. Corresponds to system features. (8 – 10)	
Task 3: Use Case Diagram (CLO2 - 10 marks)	Use case diagram does not give a clear idea of users or system functionalities. (0 – 4)	Basic system functionalities and actors identified. Use case or actor names could be better clarified. (5 – 7)	Provides a clear overview of the system functionalities and actors. Suitable advanced relationships identified (8 – 10)	
Task 4: High Level Use Cases (CLO2 – 10 marks)	High level use cases poorly written with overlap between use cases. (0 – 4)	Most of the use cases give a clear and brief description of the system, with minor errors. (5 – 7)	Each use case gives a brief description of the system, with all use cases describing the main features of the system. (8 – 10)	
Task 6: Class Diagram (CLO2 - 10 marks)	Class diagram does not reflect a conceptual understanding of the system. Major errors in formatting and relationships. (0 – 4)	Some attributes and/or relationships missing or inappropriate, minor errors in formatting and minor inconsistencies. (5 – 7)	Captures overall understanding of system. Consistent with expanded use cases. Attributes relevant and comprehensive. Suitable relationships identified between classes. (8 – 10)	
Task 7: System Sequence Diagram (CLO2) (Use Case 1)	SSD not consistent with the use case. Parameters missing or incorrect. (0 – 4)	SSD generally correct but has minor inconsistencies or errors. Operation names not consistent with purpose. (5 – 7)	Each SSD illustrates all events from the actor to the system based on the use case. Parameters reflect required data. Operation names appropriate. UML notation correct with suitable advanced elements. (8 – 10)	
Task 8: Contracts (CLO2) (Use Case 1)	Contract not consistent with SSD. Parameters missing or incorrect. State changes incorrect. (0 – 4)	Contract generally consistent with SSD. Minor issues with some state changes. (5 – 7)	Each contract describes the purpose of the operation clearly. State changes correctly described. (8 – 10)

Item (LO Assessed)	Poor	Good	Excellent	Marks
Expanded Use Case (CLO2 - 10 Marks)	Expanded use cases are too brief, main flows of information not clear. (0 – 4)	Some details missing from expanded use cases but generally captures user requirements. (5 – 7)	Expanded use cases consistent with class diagram, use case diagram and high level use cases. Includes all possible scenarios. (8 – 10)	
System Sequence Diagram (CLO2 - 10 marks)	SSD not consistent with the use case. Parameters missing or incorrect. (0 – 4)	SSD generally correct but has minor inconsistencies or errors. Operation names not consistent with purpose. (5 – 7)	Each SSD illustrates all events from the actor to the system based on the use case. Parameters reflect required data. Operation names appropriate. UML notation correct with suitable advanced elements. (8 – 10)	
Contracts (CLO2 - 10 marks)	Contract not consistent with SSD. Parameters missing or incorrect. State changes incorrect. (0 – 4)	Contract generally consistent with SSD. Minor issues with some state changes. (5 – 7)	Each contract describes the purpose of the operation clearly. State changes correctly described. (8 – 10)
